HTML APIs

HTML geolocation APIs.   HTML Drag and Drop API

- The HTML geolocation API is used to locate a user's position.
- getCurrentPosition() - is used to return the user's position.
- Example:

```html
<script>
var x = document.getElementById("demo");
function getLocation() {
  if (navigator.geolocation) {
    navigator.geolocation.getCurrentPosition(showPosition);
  } else {
    x.innerHTML = "Geolocation is not supported by this browser.";
  }
}

function showPosition(position) {
  x.innerHTML = "Latitude: " + position.coords.latitude +
  "<br>Longitude: " + position.coords.longitude;
}
</script>
```
